INDEX TO SCIENTIFIC NAMES CITED IN TAXON

VOLUME 45, 1996

Family names given originally in languages other than Latin have been treated as though they were in Latin. The abbreviations for taxonomic ranks, where necessary, conform to those used in the *Code* and in *Taxon*. All appearances of scientific names have been included in the index, including names used in figures, in figure captions, and in tables.

Infrageneric and infraspecific epithets are now arranged in descending hierarchical order – [genus], subgenus, sectio, series, [binomen], subspecies, varietas, forma; that is to say, the abbreviated rank designators are not used as part of the alphybetization. The editors feel, and we agree, that this more rational order will facilitate use of this index.
